

FEAR NOT! BCP PZI® BOVINE INSULIN FOR FELINE DIABETICS IS STILL AVAILABLE.

Dear Veterinarian:

As president of BCP Veterinary Pharmacy, I want to assure you that you need not fear any shortage in the availability of bovine PZI, which remains the insulin of choice for feline diabetics.

Postings on the Internet and some feline diabetes message boards suggest there will be a shortage of raw materials that another company needed to produce its feline insulin product, therefore causing it to be discontinued. This is not true for BCP PZI®.

Our 100% bovine-derived PZI product for cats, BCP PZI®, is and will remain readily available. The insulin crystals we use meet all U.S. Pharmacopeia Monograph Specifications. We subject BCP PZI® to ongoing analysis not only in-house but at independent testing facilities to ensure the highest quality control.

BCP Veterinary Pharmacy has been compounding BCP PZI® for more than a decade. Many diabetic cats nationwide are currently being regulated with BCP PZI®.

With only one amino acid difference, cats can accept BCP PZI® bovine insulin better because it is much more like their own. Recombinant human insulin is the furthest removed from feline insulin with four amino acid differences. Porcine-derived insulin has three amino acid differences and is structurally closest to canine insulin.

BCP offers a free 5ml sample bottle of 100u/ml BCP PZI® to those veterinarians who have not tried our insulin. Fax the attached form to 1-866-738-2439.

BCP PZI® is offered in two strengths: 40 units per ml and 100 units per ml. We offer BCP PZI® at an extremely reasonable price and plan to keep it that way.

Sincerely Yours,

Jennifer K. Gimon, R.Ph.
President & Founder, BCP Veterinary Pharmacy
Co-Founder, the American College of Veterinary Pharmacies

Which medication(s) would you like to sample free of charge? (Limit 5)

WS
